/gruve - setup and installation

1. Setup Web Server. It is necessary to have Apache Tomcat installed on the computer to setup and run the GRUVE game. Please download and install the web server from the [official site](#).

2. Setup permissions. Give write permissions to the current user at \webapps inside the Tomcat installation directory to allow the game to create log files when required.

3. Setup installation location as environment variables and in Configuration.java. Set %CATALINA_HOME% to be the installation location of the directory. Set the installation location here: `source\gruve\WEB-INF\classes\hw\macs\gruve\Configuration.java:13`.

   Ex. C:\Program Files\Apache Software Foundation\Tomcat 8.0\webapps\gruve

4. Copy the folder 'gruve' inside source into the \webapps folder of tomcat installation.

5. Start the server, and go to http://localhost:8080/gruve/
